(54) **TERMINAL PROCESSING STRUCTURE OF COMBINATIONAL SHIELDED ELECTRIC WIRE**

(57)Abstract:

PROBLEM TO BE SOLVED: To improve shielding performance of tail end branch parts by rounding a shielding layer in a cylindrical shape together with a flexible sheet so as to cover respective electric wires with respective shielded electric wires in isolated branch parts of the respective sheet-like shielded electric wires.

SOLUTION: A shielding layer 3 is rounded in a cylindrical shape together with a flexible sheet 8 so as to cover respective electric wires 1a and 1b with respective sheet-like electric wires 5C and 5D in branch parts A. The sheet 8 and the shielding layer 3 of a rounded part of the respective shielded electric wires 5C and 5D are bounded together by a tape 11 or the like so as not to touch each other at their discretion. In this way, when the shielding layer 3 is rounded in a cylindrical shape together with the sheet 3 in the branch parts A of the respective shielded electric wires 5C and 5D, the respective electric wires 1a and a drain of the shielded electric wire 5C can be shielded by its own shielding layer 3 of the shielded electric wire 5C. At the same time, the respective electric wires 1b of the shielded electric wire 5D can be shielded by its own shielding layer 3 of the shielded electric wire 5D.
